<https://www.linkedin.com/in/lavkesh-raghav-633427327>

## SUMMARY

DevOps Engineer with experience in CI/CD automation, containerization, Kubernetes orchestration, configuration management, infrastructure as code, AWS cloud services, monitoring, and Linux systems. Skilled in implementing end-to-end DevOps workflows using industry-standard tools.

## EDUCATION

Bachelors of Computer Application

**Chaudhary Charan Singh University**

2019 - 2021 Meerut, India

Master of Computer Application

**Dr. A.P.J. Abdul Kalam Technical University**

2023 - 2025 Meerut, India

## EXPERIENCE

DevOps Engineer

**DevOps Intern – APPWARS Technology**

01/sep/2025 -21/nov/2025 | Noida, Uttar Pradesh, India

- Managed end-to-end CI/CD pipelines using Jenkins for automated build, testing, and deployment processes.
- Implemented configuration management with Ansible to automate application setup and server provisioning across multiple environments.
- Deployed and managed containerized microservices using Docker and Kubernetes (EKS) clusters on AWS.
- Utilized Helm for packaging and managing Kubernetes manifests and maintaining version control of deployments.
- Created and maintained infrastructure on AWS, including EC2 instances, IAM roles, and S3 buckets.
- Integrated OpenTelemetry for distributed tracing and telemetry data collection from microservices.
- Designed and implemented monitoring and alerting dashboards in Grafana using data from VictoriaMetrics and Loki for metrics and logs.
- Worked closely with development teams to ensure reliable rollouts, canary deployments, and fast issue resolution through effective observability.

## SKILLS

**Databases & Cloud services**

**MySQL AWS**

**Programming Skills**

**python Bash**

**Tools**

**Docker Kubernetes Ansible**

**Grafana Terraform git**

**Development**

**CI/CD Incremental Releases Pipelines**

**Jenfiins**

## STRENGTHS

**Communication**

Open-minded, outgoing and patient in conversations with others.

**Certification**

Introduction to Python Technology- Ainwik Infotech

Devops Appwars Technology

Cloud & DevOps Training Certification – Cloud Train

# PROJECT

---

## Project: - DevOps Automation and Observability Setup

**Role:** DevOps Engineer

**Tools & Technologies:** Linux, Git, Jenkins, Ansible, Docker, Kubernetes, AWS, Helm, Grafana, VictoriaMetrics, Loki, OpenTelemetry

### Project Overview

The objective was to automate the deployment and monitoring processes for Airtel's microservices-based applications running on AWS Kubernetes clusters. The goal was to enhance deployment reliability, improve observability, and ensure quick recovery from failures.

### Responsibilities and Contributions

#### CI/CD Automation:

- Developed **Jenfiins pipelines** for continuous integration and delivery of multiple microservices.
- Configured build triggers on code commits from **Git repositories** for automated testing and deployment.
- Integrated quality checks and rollback mechanisms in Jenkins pipelines for zero-downtime deployments.

#### Configuration Management & Deployment:

- Used **Ansible playboofis** to automate configuration of servers and application dependencies.
- Managed environment variables, user permissions, and service restarts via Ansible roles.
- Packaged Kubernetes manifests using **Helm charts** for simplified deployments and version control.

#### Containerization & Orchestration:

- Created and managed **Docfier images** for microservices.
- Deployed containers on **Kubernetes clusters (EKS)** using Helm for managing multiple environments (dev, staging, prod).
- Managed scaling, self-healing, and rolling updates using Kubernetes native features.

#### Monitoring and Observability:

- Integrated **OpenTelemetry** to capture distributed traces and application performance metrics.
- Configured **VictoriaMetrics** as a time-series database for storing application metrics.
- Used **Lofii** for centralized log collection and integrated it with **Grafana** dashboards.
- Built **Grafana dashboards** to monitor service uptime, latency, error rates, and resource usage.
- Configured **alerts** for anomaly detection and proactive incident response.

#### Cloud Infrastructure:

- Deployed and managed **AWS infrastructure** including EC2, S3, IAM roles, and networking setup.
- Ensured high availability by managing multiple node groups within EKS clusters.

### Key Achievements

- Reduced deployment time by **40%** through CI/CD automation.
- Improved application uptime by **30%** through proactive monitoring and alerting.
- Enhanced observability and troubleshooting efficiency using OpenTelemetry and Grafana-Loki stack.
